Actualització a Debian 10.12 "buster" - Part 2 - Agost de 2022

Debian 10.12 es va publicar el 26 de març de 2022. Debian 10.0 es va publicar inicialment el 6 de juliol de 2019.

Aquesta pàgina conté la segona part de la descripció detallada del procés d'actualització a Debian 10.12 "buster".

Instal·lació de PHP5

Segueixo les instruccions a <https://tecadmin.net/install-apache-php-fpm-debian-10/> per instal·lar PHP-5 a partir del magatzem Sury,

Primer edito el contingut del fitxer `/etc/apt/sources.list.d/06-php-from-sury.list` per activar el magatzem Sury

```
$ cat /etc/apt/sources.list.d/06-php-from-sury.list
## deb [signed-by=/usr/share/keyrings/deb.sury.org-php.gpg]
https://packages.sury.org/php/ buster main

deb https://packages.sury.org/php/ buster main

# apache2ctl restart

```

i el problema sembla haver-se resolt, però quan intento crear una reserva surt un nou missatge d'error,

```

2022-08-07 11:47:50 15798 [Warning] Aborted connection 15798 to db:
'bmdbb117' user: 'sermnadmin' host: 'localhost' (Got timeout reading
communication packets)

```

Una cerca a Google indica que [aquest error està relacionat amb la variable "wait_timeout"](#), que té un valor per defecte de 40 segons que podria ser insuficient en el nostre cas.

La solució és assignar un nou valor a aquesta variable a la secció [mysqld] del fitxer de configuració,

```

# /etc/mysql/mariadb.conf.d
# cp 50-server.cnf 50-server.cnf.BKUP-20220807
# vi 50-server.cnf

```

i afegir les línies

```

# diff 50-server.cnf 50-server.cnf.BKUP-20220807
45,53d44
< # * Local Tuning - MCE - 20220807
< #
< # MySQL Got timeout reading communication packets when reading federated

```

Per eliminar l'error associat a la funció "T_(", l'elimino provisionalment del codi,

```
# diff db.php db.php.BKUP-20220807  
46c46  
< $errmsg = sprintf(('<p>Sorry, I couldn\'t connect to the database, so  
there\'s nothing I can presently do. This could be due to a booking system  
misconfiguration, or a failure of the da  
tabase subsystem.</p><p>If this persists, please contact the <a  
href="mailto:%s">booking system administrator</a>.</p>'),  
$conf->AdminEmail);  
---  
> $errmsg = sprintf(T_('<p>Sorry, I couldn\'t connect to the database, so  
there\'s nothing I can presently do. This could be due to a booking system  
misconfiguration, or a failure of the  
database subsystem.</p><p>If this persists, please contact the <a  
href="mailto:%s">booking system administrator</a>.</p>'),  
$conf->AdminEmail);
```

intento crear una reserva sense èxit, i comprovo el missatge d'error al registre de MariaDB:

```
2022-08-07 18:36:08 590 [Warning] Aborted connection 590 to db: 'bmbdb117'  
user: 'sermnadmin' host: 'localhost' (Got an error reading communication  
packets)
```

Una consulta a Google indica que [aquest error té relació amb la variable](https://dev.mysql.com/doc/refman/5.6/en/server-system-variables.html#sysvar_max_allowed_packet)

[\https://dev.mysql.com/doc/refman/5.6/en/server-system-variables.html#sysvar_max_allowed_packet
| [max_allowed_packet](https://dev.mysql.com/doc/refman/5.6/en/server-system-variables.html#sysvar_max_allowed_packet).

Per intentar resoldre l'error, incremento el valor de la variable,

```
# diff 50-server.cnf 50-server.cnf.BKUP-20220807  
34c34  
< max_allowed_packet      = 64M  
---  
> #max_allowed_packet      = 16M  
45,53d44  
< # * Local Tuning - MCE - 20220807  
< #  
< # MySQL Got timeout reading communication packets when reading federated  
table  
< #  
https://dba.stackexchange.com/questions/205398/mysql-got-timeout-reading-com  
munication-packets-when-reading-federated-table  
< #
```

```

< wait_timeout=3600      # from 40 seconds may reduce handler_rollback
count
<
<
< #
73,77c64,68
< slow_query_log_file    = /var/log/mysql/mariadb-slow.log
< long_query_time        = 10
< log_slow_rate_limit    = 1000
< log_slow_verbosity     = query_plan
< log-queries-not-using-indexes
---
> #slow_query_log_file    = /var/log/mysql/mariadb-slow.log
> #long_query_time        = 10
> #log_slow_rate_limit    = 1000
> #log_slow_verbosity     = query_plan
> #log-queries-not-using-indexes

```

Però el problema persisteix.

Finalment, després d'activar les opcions per mostrar les comandes SQL i altres avisos i errors al programa de reserves:

```

[error_handling]
; Browser error stream:
; Set these to 0 for production systems, 1 for development/debugging
; Show all SQL statements in the browser
; VerboseSQL = 0
VerboseSQL = 1
; Show all PHP warnings (such as uninitialised variables)
AllWarnings = 1
; Show a warning if install folder still is in the server location
ignore_installer = 1
; Show all GET and POST data provided by the browser
; VerboseData = 0
VerboseData = 0
; Use the dBug class from http://dbug.ospinto.com/ to pretty print error
; and debug output (designed for developer use only; you need to put
dBug.php
; somewhere in your include path for this to work).
UseDBug = 0

```

aconsegueixo veure que l'error està relacionat amb una configuració més estricta de MariaDB respecte versions anteriors, configuració que no és compatible amb la versió actual del programa. Després de provar a modificar la configuració del gestor de la base de dades sense èxit,

- [MariaDB - SQL_MODE](#)
- [MariaDB - OLD_MODE](#)

trobo que la forma més fàcil de resoldre **provisionalment** el problema, és fer ús de l'opció **IGNORE** a la comanda INSERT de forma que,

Normally INSERT stops and rolls back when it encounters an error.

By using the IGNORE keyword all errors are converted to warnings, which will not stop inserts of additional rows.

The IGNORE and DELAYED options are ignored when you use ON DUPLICATE KEY UPDATE.

Prior to MySQL and MariaDB 5.5.28, no warnings were issued for duplicate key errors when using IGNORE. You can get the old behavior if you set OLD_MODE to NO_DUP_KEY_WARNINGS_WITH_IGNORE. ([INSERT IGNORE](#))

Per això cal modificar el fitxer /opt/bmbee-117/inc/formslib/dbrow.php,

```
# diff dbrow.php dbrow.php.BKUP-20220807
252c252
<         $q = 'INSERT IGNORE INTO '.$conf->value('database',
'tableprefix').$this->table.' SET '.$vals;
---
>         $q = 'INSERT '.$conf->value('database',
'tableprefix').$this->table.' SET '.$vals;
```

Després de fer el canvi, comprovo que es poden crear reserves i un nou compte d'usuari, i assumeixo que la resta de comandes INSERT també funcionaran correctament.

Continuació: [Actualització a Debian 10.12 - Part 3](#)
