

# Consum anual de nitrogen líquid

| Any  | Nombre de<br>comandes<br>(recàrregues) | Total kg de<br>LIN | Variació<br>interanual | Observacions                                                                                                                                                 |
|------|----------------------------------------|--------------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2020 | 19                                     | 49.441 kg          | n.a.                   | Consum fins el 2020-12-23                                                                                                                                    |
| 2019 | 21                                     | 53.189 kg          | -20,02%                | Consum fins el 2019-12-27                                                                                                                                    |
| 2018 | 24                                     | 66.501 kg          | 9,34%                  | Consum fins el 2018-12-28                                                                                                                                    |
| 2017 | 22                                     | 60.818 kg          | 16,53%                 | Consum fins el 2017-12-19. Inclou el refredament i recàrrega del tanc després d'haver-se quedat buit per accident, i el refredament del 250robot per quench. |
| 2016 | 18                                     | 52.191 kg          | 2,13%                  | Consum fins el 2016-12-20                                                                                                                                    |
| 2015 | 18                                     | 51.105 kg          | -8,44%                 | Consum fins el 2015-12-23                                                                                                                                    |
| 2014 | 19                                     | 55.816 kg          | 8,85%                  | Consum fins el 2014-12-20                                                                                                                                    |
| 2013 | 18                                     | 51.280 kg          | -2,88%                 | Consum fins el 2013-12-20                                                                                                                                    |
| 2012 | 20                                     | 52.800 kg          | -3,56%                 | Consum fins el 2012-12-27                                                                                                                                    |
| 2011 | 20                                     | 54.751 kg          | 13,68%                 | Consum fins el 2011-12-27                                                                                                                                    |
| 2010 | 19                                     | 50.352 kg          | -7,31%                 | Consum fins el 2010-12-27                                                                                                                                    |
| 2009 | 19                                     | 52.048 kg          | -2,16%                 | Consum fins el 2009-12-28                                                                                                                                    |
| 2008 | 18                                     | 53.196 kg          | 55,58%                 | Refredament del 400wb per quench                                                                                                                             |
| 2007 | 12                                     | 34.192 kg          | -15,33%                | Refredament del 360 per quech                                                                                                                                |
| 2006 | 14                                     | 40.382 kg          | —                      | Refredament del 250robot per quench                                                                                                                          |
